Optional/General comments	<p>Groundnut is an important food legume and oilseed crop of tropical and subtropical areas and cultivated on about 25 million hectare of land in more than 90 countries in the world, under different agro-climatic regions where rainfall during the growing season exceeds 500 mm. However, India, China, USA, Senegal, Indonesia, Nigeria, Brazil and Argentina are the major groundnut producing countries. Though, nutritionally groundnut is an energy rich crop, it is grown mainly on energy-starved conditions of poor fertility soils and about 70% of the its production in the world occurs in the semi-arid tropics with average yield is around 800 kg ha⁻¹. There are fluctuating trends in area and production of groundnut in India, however, it is grown on an area of about 8 million hectare, producing about 8 million tonnes. India has the largest groundnut area and also till 1992 was the chief-producer of groundnut in the world. From 1993 onwards, China, due to its higher productivity. To boost the productivity of groundnut in farmers field this experiment was conducted.</p> <p>Article is recommended for publication by attending the correction</p>
