

Review Form 3

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_123197
Title of the Manuscript:	Randomized, Placebo, Controlled Clinical Trial Protocol of Mandibular Mobilization in Individuals with Anterior Disc Displacement with Magnetic Resonance Imaging Assessment.
Type of the Article	Study Protocol

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.		
Is the title of the article suitable? (If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.		
Are subsections and structure of the manuscript appropriate?		
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.		
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.		

Review Form 3

<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<p>Overall Comments: The article is very well-written with a lot of literature to back up the thinking behind the protocol designed to achieve the objective of the study. It is very nice to see an attempt of a non-invasive physiotherapeutic method to address the issue of TMJ. I recommend this article for publication after review.</p> <p>Detailed Comments (all are also marked with comments in the document):</p> <p>Introduction: Well written with minor typographic errors. However, my concern is on the use of MRI as a sole diagnosis method. Though is the current gold standard, it would be great if the authors could combine MRI with a supplementary diagnosis method to increase the diagnostic sensitivity and specificity. Another suggestion is adding information on physiotherapy in the introduction. I believe that since the aim of the study is to assess the pre and post MRI image after joint mobilization, a short introduction of the physiotherapeutic therapy is due in the introduction.</p> <p>Randomization and Blinding: Are the physiotherapist of the same experience and qualifications? Since the observation may be biased due to the subjectiveness of the physiotherapist.</p> <p>Sample Size: Why is there an intervention with botulinum toxin?</p>	

PART 2:

	<p>Reviewer's comment</p>	<p>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
