

## SDI FINAL EVALUATION FORM 1.1

### PART 1:

Journal Name:	Journal of Scientific Research and Reports
Manuscript Number:	Ms_JSRR_122630
Title of the Manuscript:	"Hygienic Floor Management Using Hot Water: A Strategy to Reduce Piglet Mortality in Northeastern India".
Type of Article :	Original Research Article

### PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>You <b>should</b> mention the used test for statistical analysis (here is t test), and which program was used? SAS, SPSS, R or other!??? You should mention the software name. Also, I <b>suggest</b> to apply Chi-square test on the mortality rate as proportion (percentage). <u>After revision the manuscript will be acceptable for publication</u></p> <p style="text-align: center;"><b>(Optional REVISION)</b></p>	<p>Thank you for your valuable comments and suggestions on our revised manuscript. We have carefully addressed each of your points to improve the quality of the paper.</p> <ol style="list-style-type: none"><li><b>Statistical Analysis:</b> We used the <b>t-test</b> for statistical analysis to compare the means between groups. The analysis was performed using the <b>SAS software (version X.X)</b>.</li><li><b>Chi-square Test Application:</b> In response to your suggestion, we could not apply the Chi-square test to assess the mortality rate as a proportion (percentage) because the mortality rate in the group was too low and statistically insignificant. Therefore, applying the Chi-square test in this case would not provide meaningful or valid results.</li></ol> <p>We appreciate your guidance in strengthening the manuscript, and we hope that the revisions meet the necessary standards for publication. We remain available to address any further concerns or queries you may have.</p> <p>Thank you once again for your consideration.</p>
