

Review Form 3

Journal Name:	Journal of Complementary and Alternative Medical Research
Manuscript Number:	Ms_JOCAMR_128038
Title of the Manuscript:	Histomorphological Assessment of Adrenal Glands in Wistar Rats Following Myricetin Treatment Against MNU-Induced Oxidative Stress.
Type of the Article	Original Research Article

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.		
Is the title of the article suitable? (If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.		
Is the manuscript scientifically, correct? Please write here.		
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.		

Review Form 3

<p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<ul style="list-style-type: none"> - Manuscript need English editing - Firstly, biochemical analysis should be mentioned followed by histopathological analysis along the manuscript. - In abstract: adrenal gland antioxidant enzyme activities and histomorphology. Instead of adrenal gland histomorphology and antioxidant enzyme activities. - In material and methods (2.4.7 Histological Analysis): Adrenal glands were fixed in 10% neutral buffered formalin. After fixation, the specimens were washed in water, dehydrated with an ascending ethanol series, cleared with xylene, infiltrated with soft paraffin, and embedded in hard paraffin. Then, the desirable paraffin sections of 5µm were obtained. The deparaffinized sections were finally stained with haematoxylin and eosin (H&E). Stained slides were examined under a light microscope.. Instead of Adrenal glands were fixed in 10% formalin and subsequently processed for histopathological examination. Tissue sections (5 µm) were sliced using a microtome, stained with haematoxylin and eosin (H&E), and mounted on glass slides. Slides were examined under a light microscope. - Statistical analysis section: Did the normality and homogeneity tests were performed - Figure legends: not clear and labels on figure not match Figure legend - Histopathological findings need scientific revision. 	

PART 2:

	<p>Reviewer's comment</p>	<p>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
