

Review Form 3

Journal Name:	Asian Journal of Advanced Research and Reports
Manuscript Number:	Ms_AJARR_128151
Title of the Manuscript:	IMPACT OF TEACHING-STYLE SAFETY TRAINING ON THE SAFETY PERFORMANCE OF SELECTED OIL AND GAS COMPANIES IN THE NIGER-DELTA
Type of the Article	

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript provides valuable insights into the effectiveness of teaching-style safety training on safety performance in the oil and gas sector, specifically in the Niger Delta. It addresses an important gap by evaluating both leading and lagging indicators of safety performance, which is critical for improving workplace safety. The findings contribute to the growing body of knowledge on the role of training methodologies in enhancing safety compliance and participation, which is highly relevant for academia, industry professionals, and policymakers.	
Is the title of the article suitable? (If not please suggest an alternative title)	The current title, "Impact of Teaching-Style Safety Training on the Safety Performance of Selected Oil and Gas Companies in the Niger-Delta", is suitable as it reflects the study's scope and objectives. However, a more concise alternative could be: "Teaching-Based Safety Training: Effects on Safety Performance in Niger Delta Oil and Gas Firms."	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract is comprehensive, but some points can be improved for better clarity and conciseness: <ul style="list-style-type: none"> Consider simplifying the statistical details (e.g., remove p-values or regression coefficients unless essential) to make it more reader-friendly. Include a more explicit mention of practical implications for industry applications. 	
Is the manuscript scientifically, correct? Please write here.	The manuscript is scientifically robust and uses appropriate methodologies, such as regression analysis and structural equation modelling. However, the reasoning behind certain methodological choices, such as the specific sampling technique and tools for data collection, should be better justified. Additionally, the discussion should provide deeper insights into why certain findings (e.g., insignificant impacts on safety participation) emerge	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references cited are extensive and relevant, but some of them are relatively dated (e.g., references from the early 2000s). Incorporating more recent studies (from the last five years) on safety training and performance would strengthen the literature review. Suggested areas for additional references: <ul style="list-style-type: none"> Recent advancements in training methodologies in industrial safety. Studies on the integration of technology in safety training. 	
Is the language/English quality of the article suitable for scholarly communications?	The language is generally suitable for scholarly communication but could benefit from minor edits to improve readability and grammar. Some sentences are overly long or repetitive, which affects clarity. Proofreading and editing for conciseness and flow are recommended.	
Optional/General comments
