A REVIEW OF ETHNOMEDICINAL USES, PHYTOCHEMISTRY AND PHARMACOLOGY OF NIGERIAN *CROTONS*

ABSTRACT

Approximately 80% of the world's population relies on traditional plants to produce and synthesize contemporary medications. In the past, the production of plants as sources of pharmaceuticals or medicines for wound healing and treatment was based on superstition and experience that was passed down from one generation to the next. The majority of these plants belong to the families Euphorbiaceae, Leguminoceae, Rutaceae, and Piperaceae. The Euphorbiaceae family includes Croton plants. They are found in tropical and sub-tropical areas of both hemispheres and comprise of 1,300 species of trees, shrubs, and plants. This study focused on providing detailed review on chemical components of Croton species found in Nigeria. The term "ethnomedicinal potentials" refers to the therapeutic applications of plants that have positive pharmacological effects on both human and animal bodies. Prior to the development of modern medicine, certain Croton species were used to cure rheumatism, diabetes, diarrhea, cancer, and other illnesses. Active alkaloids are abundant in the Croton genus. In addition to triterpenoids, flavonoids, sesquiterpenoids, phytosterols, N-containing chemicals, cyclohexane derivatives, aliphatic molecules, andferulic acid ester derivatives, diterpenoids are said to be widely distributed throughout the African Croton. This work is a critical review of ethnomedicinal, phytochemistry and pharmacology of various Nigerian Croton species. The study also discussed the chemical constituents of different Croton species.

Key word: *Croton*, Nigeria, phytochemistry, euphorbiaceae, African, traditional.

INTRODUCTION

Approximately around 80% of the world's population used traditional plants to produce and synthesize contemporary medications. In the past, production of plants as sources of medications for wound healing and treatment was based on superstition and experience that were passed from generation to generation, essentially through word of mouth (Folkloric). [1]The majority of these plants belong to the families *Euphorbiaceae*, *Leguminoceae*, *Rutaceae*, and *Piperaceae*. The *Euphorbiaceae* family comprises of *croton* plants. They are found in tropical and sub-tropical environments of both hemispheres and comprise of about 1,300 species of trees, shrubs, and plants.[2] There are approximately 292 species of *Croton* in Africa, and eleven (11) of them are found in Nigeria. *Crotonhirtus* was recently discovered in Nigeria, Sierra Leone, Cote d'Ivoire, Republic of Congo and Gabon. Around the world, C*roton* species are applicable to treat a variety of conditions including cancer, diarrhea, intestinal worms, discomfort, ulcers, and weight loss.[2];[3];[4] The term "ethnomedicinal potentials" refers to the therapeutic applications of plants that possess positive pharmacological effects on both human and animals. Prior to the development of modern medicine, certain *croton* species were used to treats rheumatism, diabetes, cancer, and other illnesses. Active alkaloids are abundant in the *Croton* genus. [5];[6] In addition to triterpenoids, flavonoids, sesquiterpenoids, phytosterols, N-containing chemicals, cyclohexane derivatives, aliphatic molecules, and ferulic acid ester derivatives, diterpenoids are said to be widely distributed throughout the African *Croton*.[4]Antihypertensive, antimalarial,

Comment [AW1]: This word is general name it can't go with the two proceeding words 'trees' and 'shrubs'. You better replace it with 'herbs'.

Comment [AW2]: Must come before the last chemical compound 'diterpenoids'.

Comment [AW3]: You better include sentences on the methods you used to conduct your work and conclusion in your abstract.

Comment [AW4]: Replace by medicinal.

Comment [AW5]: Be consistent in capitalization.

Comment [AW6]: Replace with the growth form type preferably 'herbs'

Comment [AW7]: You need citation.

antimicrobial, and myo-relaxant are some other actions of *Croton* isolates that have been determined.[2]

ETHNOMEDICINAL PROPERTIES AND GEOGRAPHICAL REPRESENTATION OF CROTON GENUS IN NIGERIA

African traditional healers have traditionally used medicinal plants as permanent supply to cure a number of severe diseases.[7] In Africa, South Asia, and Latin America, *Croton* species have long been used to cure a variety of infections and digestive issues. [8];[9];[10]

***CROTONGRATISSIMUS*BURCH.**

This plant is indigenous to central and tropical West Africa. Senegal, Sudan, Botswana, and South Africa are among its locations.[11];[12] Freestyle and sub-freestyle are its two divisions.[4] Sub *gratissimus* differs from *gratissimus* in that it has stellate hairs on the upper leaf surface, whereas *gratissimus* does not. They can be found in South Africa's far north, Zimbabwe, and Botswana.[4] It is used by the indigenous community as essential oil, food flavoring, and medicine.[12] Malaria is treated with an infusion made from bark slashes. Bleeding gums are treated with the burned and powdered bark.[12] Soup created from a leaf decoction is used as a wash to cure headaches, fever, and diarrhea.[13] The shoots are used as a febrifuge, tonic, and to ease menstruation pain. Additionally, the root is employed as an aperient.[13] Its bark extract has long been used as a styptic, cathartic, and treatment for a variety of ailments, pleurisy, uterine disorders, and intercostal neuralgia.[14] Because of their fantastic aroma, its young branches are dried and ground into powder for use in perfume industries.[14]

CROTONGRATISSIMUS VAR.GRATISSIMUS

The Republic of Congo and South Africa are home to this species of *Croton*.[13] The plant material was gathered from Nigeria, which is said to be the primary location for *Crotonzambesicusis*.[15]

CROTON *HIRTUS* L'Her., Stirp.

The annual herb *Crotonhirtus*L'Her., Stirp. reaches a height of approximately 60 cm.[13] It is famous across the West Indies and tropical America, has recently been documented in Nigeria, Sierra Leone, Cote d'voire, and Benin, and is now naturalized throughout the tropics. [3];[4];[16]

***CROTONLOBATUS* (Linn.)**

The base of this annual herbaceous plant turns woody. Senegal, Gambia, Guinea Bissau, and Nigeria are among their environments. [13] It is referred to as "gaasayaa" in Hausa, "ajekofole" in Yoruba, and "Okwe-one" in Igbo. Traditionally, the boiled leaves are injected as a therapy for gynecological infections. When combined with palm oil, the leaves are applied topically to rheumatism and coastal discomfort. As a purgative, the leaf and bark infusion is administered orally or by injection.[13] In Nigeria, it is used to lessen scorpion sting agony. They are used to treat headaches, skin conditions, and ulcers. In Togo (Prota), the leaf sap is applied as an eye drop. In the event of an abortion or hiccup, the flower and root decoction is given as an antispasmodic (Prota). A leaf infusion is used to alleviate fever, and when combined with honey and palm oil, it can be applied topically on stiff limbs (Prota).

***CROTONMACROSTACHYUS* (Hoscht.)**

Locally it is named as 'Bisana', in Amharic; 'Bakkaniisa', in Afan Oromoand popularly referred to as 'Rush slide'in English.[17] In the tropics, it is the most prevalent plant.[85] It is a medium-sized deciduous tree that is indigenous to Ethiopia, Eretria, Kenya and Nigeria.[18] In addition, it is found in Liberia, Malawi, Zambia, and Zimbabwe. Moreover, Congo (DR) and Angola are home to it infrequently. [19];[4] The bark, fruits, leaves, roots, and seeds of *Crotonmacrostachyus* are said to have a variety of medicinal qualities and are used as herbal remedies for at least 61

Comment [AW8]: Move it before you discuss about the type of chemicals in croton and after the point that you discussed the diseases treated by croton prior to the development of modern medicine.

Comment [AW9]: Elaborate this paragraph. Rearrange you better start the case of the world and come to the case of Africa finally close with the case in Nigeria. To have good flow you better include list of croton species that you discuss in the next paragraphs.

Comment [AW10]: You don't need to capitalize the species name except the begging letter.

Comment [AW11]: Instead of putting this variety under separate subtitle it is better to include the issue raised under the subtitle of the ***CROTONGRATISSIMUS*BURCH.** Just by mentioning the presence of this variety in the species.

Comment [AW12]: What is it? Is it part of the species name? Use symbol on top of Her to use the right phonetics. *Croton hirtus*L'Hér

Comment [AW13]: Elaborate ethno medicinal role of the species.

Comment [AW14]: Replace by L. to be consistent.

Comment [AW15]: Replace by dominant or conspicuous.

illnesses and ailments.[17] Blood clots, cancer, constipation, diarrhea, epilepsy, malaria, stomach discomfort, typhoid and wounds are among the conditions for which it has a long medicinal application. [20];[17] Crushed leaves of *Crotonmacrostachyus* are used to treat hemorrhoids, and the shoots are used to treat fever and edema. Its stem bark is macerated and used as a uterotonic to discharge retained placenta and as an abortifacient.[21] A decoction, infusion, or maceration of its leaves, root bark, and stem bark is used as a vermifuge and purgative throughout Madagascar and tropical Africa. [22];[4]To prevent bloating, its powdered roots are consumed with milk.[4] Ethiopian indigenous people compress the roots and fruits to make a water infusion that is used to treat venereal infections. [23];[4] The Nandi and Kikuyu community of Kenya utilized the leaf juice to heal wounds and the root and leaf decoctions to treat malaria. [24];[4] The plant's decoction, which is made from several parts, is used to cure female infertility, constipation, and stomachaches. An infusion of the bark is used to cure rheumatism and chest issues in East Africa. [4];[25]

***CROTONMEMBRANACEUS* Müll. Arg.**

West tropical African countries including Ghana, Cote d'Ivoire, and Nigeria are home to this perennial plant. [12];[4] Urinary retention brought on by measles and an enlarged prostate can be cured with its root bark.[12] The herb is used as a treatment for a number of gastrointestinal issues by the Yoruba people of Nigeria. [26];[4]

CROTONNIGRITANUS

The shrub *Crotonnigritanus* can reach a height of three meters.[13] Senegal, Benin, Guinea, Nigeria, and west tropical Africa are among its locations.[12] In the past, the plant was reportedly collected from the wild and used to make regional medicines. In Sierra Leone's Scarcies River region, the herb is applied as a compress to wounds.[13]

***CROTONPENDULIFLORUS* Hutch**

It resembles a spreading-crowned tree. West tropical Africa, including Gabon, Nigeria, Sierra Leone, and the Central African Republic, are homes to it.[12] In Ghana, the leaf infusion is used to treat fever, while in Cote d'Ivoire, it is used to treat menstruation abnormalities.[12] Its seeds contain oil that is used as a purgative (Prota). The seed extract is used to treat gastrointestinal issues and uterine cancers in Nigeria. [4];[26]

***CROTONPSEUDOPULCHELLUS*Pax**

East Kenya, Cote d'Ivoire, Burkina Fasso, Nigeria, and Ethiopia are the primary locations for this *Croton* genus in tropical Africa. [4];[12] The leaves are traditionally applied to the chest as a medicine for chest ailments and used as a treatment for ulcers.[13] The decoction of the roots is used to treat asthma. To treat a head cold, the powdered root is consumed as snuff.[13] Burning *Crotonpseudopulchellusis* and using the smoke to flavor fresh milk is a common condiment in Kenya's coastal regions.[27] Additionally, it is utilized to treat tussive and viral infections. [4];[28] In South Africa's central and southern regions, this *Croton* species is used to treat TB symptoms like fever, coughing, and blood in sputum. [11];[29]

***CROTONSYLVATICUS* (Hochst.)**

Tropical regions of Africa, including, Tanzania, and Kenya, are home to this ornamental tree, which grows quickly.[12] Guinea and southern Nigeria are unusual places to find it.[4] Traditional remedies for TB, fever, digestive issues, and stomach pain in Tanzania and Kenya include decoctions of leaves and root bark.[11] Additionally, it is used as a purgative to reduce inflammation and as a malaria wash.[30] Elephantiasis is treated with *Crotonsylvaticus* wood shavings.[13] Ear infections are treated with the juice of young leaves.[12] Rheumatism, gastrointestinal disorders, dropsy, and uterine issues are all treated with the bark decoction.[12] On swellings, the ground roots are applied as a poultice.[30] To relieve excruciating

Comment [AW16]: But your title mentioned Nigeria. If the species is unusual in Nigeria there is no need to consider this particular species in this article.

stomachaches, the ground bark is soaked in milk.[4] In Gazaland (present-day Zimbabwe and Mozambique), the bark powder is also used as a fish poison and applied topically on scarifications to alleviate rheumatism, chest pains, and inflammation.[4] Additionally, cattle gall-sickness is treated with the powdered bark.[32] The root is used to cure pleurisy and as a therapy for indigestion. Malaria is also treated with several plant parts. [4];[33]

***CROTONZAMBESICUS* Mull. Arg.**

Sierra Leone, Mali, Dahomey, Niger, Gambia, and Nigeria are home to these shrubs or tiny trees.[13] In Sierra Leone and Nigeria, *Crotonzambesicus* is used as a traditional medicine for a variety of purposes. The roots are used as an aperient, and the leaf decoction is used as a fever wash. Convulsions and dysentery are treated internally with it.[4] In Benin, the leaf decoction is also used to treat urinary tract infections and lower blood pressure.[34] The Ibibios of Nigeria utilize the root as an antidiabetic and antimalarial, while the Sudanese use it to relieve menstrual pain. [4];[34];[35]

PHYTOCHEMISTRY AND PHARMACOLOGY OF NIGERIAN CROTON

Many research work has been carried out on various species of *Croton* plants which yields the isolation of terpenoid, diterpenoids, triterpenoids, non-terpenoid such as alkaloids, flavonoids, lignans.[36] Isolation of megastigmane glycosides.[37]Phytochemical analysis of the leaves and stems of *C. gratissimus* revealed the presence of alkaloids, amino acids, phenolic compounds, flavonoids, carbohydrates, terpenoids, saponins and fixed oils and fats.[38]*Croton gratissimusburch*was reported to predominantly yielded cembranediterpenoids including a new cyclo-cembranoid skeleton (**1**).[39] α-Glutinol(**2**), lupeol (**3**), eudesm-4(15)-ene-1β,6α-diol (**4**) and 24-ethylcholesta-4,22-dien-3-one (**5**) have also been reported from *C. gratissimus*.[10];[39]Isolated flavonoids (**6–11**), 3-methoxy-4-hydroxybenzoic acid (**12**), and benzyltetrahydroisoquinoline alkaloids laudanine (**13**) and laudanosine (**14**) from C. *gratissimus*. [40] isolated fourteen compounds such as caryophyllene oxide (**15**), 1β-methoxycaryolan-9β-ol (**16**), kaur-16-en-19-oic acid (**17**), *cis*-ozic acid (**18**), spathulenol (**19**), lupeol (**3**), 7δ-methoxyopposit-4(15)- en-1β-ol (**20**), germacra-4(15),5,10(14)-trien-1β-ol (**21**), β-sitosterol (**22**), *ent*-kaur-16-en-18-ol (**23**), 15-methoxy-*neo*-clerodan-3,13-dien-16,15-olide-18-oic acid (**24**), 6α-methoxyeudesm-4(15)-en-1β-ol (**25**), sucrose (**26**) and N-methyl-*trans*-4-hydroxy-L-proline (**27**) from *Crotongratissimus*.[40], [41]Also reported the presence of (−)-(1*R**,4*R**,10*R**)-4-methoxycembra-2*E*,7*E*,11*Z*-trien-20,10-olide (**28**), (−)-(1*S**,4*R**,10*R**)-1-hydroxy-4-methoxycembra-2*E*,7*E*,11*Z*-trien-20,10-olide (**29**), (−)-(1*S**,4*S**,10*R**)-1,4-dihydroxycembra-2*E*,7*E*,11*Z*-trien-20,10-olide (**30**), (−)-(1*S**,4*S**,10*R**)-1,4-dihydroxycembra-2*E*,7*E*,11*Z*-trien-20,10-olide (**31**), (+)-(10*R**)-cembra-1*E*,3*E*,7*E*,11*Z*,16-pentaen-20,10-olide (**32**), (+)-(10*R**)-cembra-1*Z*,3*Z*,7*E*,11*Z*,15-pentaen-20,10-olide (**33**), (+)-(5*R**,10*R**)-5-methoxycembra-1*E*,3*E*,7*E*,11*Z*,15-pentaen-20,10-olide(**34**), (+)-(1*S**,4*S**,7R*,10*R**)-1,4,7-trihydroxycembra-2*E*,8(19),11*Z*-trien-20,10-olide (**35**), (−)-(1*S**,4*S**,7*S**,10*R**)-1,4,7-trihydroxycembra-2*E*,8(19),11*Z*-trien-20,10-olide (**36**) and (+)-(1*S**,4*R**,8*S**,10*R**)-1,4,8-trihydroxycembra-2*E*,6*E*,11*Z*-trien-20,10-olide (**37**) in the leaves of C. *gratissimus*. Four flavonoids, kaempferol (**38**), isovitexin (**39**), helichryroside-3-methyl ether (**40**) and tiliroside (**41**) was found in the leaf extract of *C. gratissimus*var. *gratissimus*.[42]*Crotongratissimus var. subgratissimus*was reported to contain α-phellandrene (**42**), germacrene D (**43**), and 1,8-cineole (**44**) and contains antimicrobial property. [43];[44] In *Crotongratissimus var. gratissimus*, the hexane, ethyl acetate, butanol and 20% aqueous methanol extracts showed weak antioxidant capacity and acetyl cholinesterase (AChE) inhibitory effects. [4];[15]

Crotonhirtus L. found in Costa Rica are reported to have bisnor-[15-16]-13α- hydroxy-2-oxodolabra-1(10)-3-diene (**45**), 15,16-dihydroxy-2-oxodolabradan-3-ene (**46**), 16- hydroxy-2,15-

dioxodolabradan-3-ene (**47**), twelve kaurane diterpenoids;16α,17-dihydroxy-7- oxokaurane (**48**), 6β,16α,17-trihydroxy-7-oxokaurane (**49**), 3α,16α,17-trihydroxy-7- oxokaurane (**50**), 3α,6β,16α,17-tetrahydroxy-7-oxokaurane (**51**), including two cyclopropakauranes, 7β,11β,16α,17-tetrahydroxycyclo-[3,18]-kaurane (**52**), 16α,17- dihydroxy-7-oxocyclo-[3,18]-kaurane (**53**), the hirtusanes, 16α,17-dihydroxy-7-oxohirtusan- 3-ene (**54**), 16α,17-dihydroxy-7-oxohirtusan-3,5-diene (**55**), 3β,4β-epoxy-16α,17-dihydroxy-7-oxohirtusan-5-ene (**56**), 3α,4α-epoxy-16α,17-dihydroxy-7-oxohirtusan-5-ene (**57**), 3β-H-16α,17-dihydroxy-7-oxohirtusan-4(19)-ene (**58**), 3β,16α,17-trihydroxy-7-oxohirtusan-4(19)- ene (**59**), five germacradiene esters, 6β,8α-dihydroxy-8-*O*-benzoylgermacra-1(10)-*Z*,4*E*-dien-14-oic acid (**60**), 6β,8α-dihydroxy-6-*O*-acetyl-8-*O*-benzoylgermacra-1(10)-*Z*,4*E*-dien-14-oic acid (**61**), 6β,8α-dihydroxy-8-*O*-benzoylgermacra-1(10)*E*,4*E*-diene (**62**), 6β,8α-dihydroxy-6- *O*-acetyl-8-*O*-benzoyleleman-1(2),3(4)-dien-14-oic acid (**63**), 6β,8α-dihydroxy-8-*O*-benzoyleleman-1(2),3(4)-dien-14-carboxyl-γ-lactone (**64**). [36] Isolated (-)-5,8-dihydroxyjatrophan-3-one (**65**) and (+)-14,16,17-trihydoxykauran-1-one (**66**) from the root of *Croton hirtus*occurring in Malaysia. The main compounds found in the oil of the leaves from Croton*hirtus* collected at Simões were spathulenol (**19**), E-caryophyllene (**67**), bicyclogermacrene (**68**), α-cadinol (**69**) and cubenol (**70**) .[45]Dihydro-β-ionol-*O*-[arabinosil(1-6) glucoside](**71**), dihydro-β-ionol-*O*-[arabinosel(1→6) glucoside] (**72**), β-sitosterol (**22**) and isorhamnetin-3-*O*-rutinoside (**73**) was recently isolated.[46] The essential oil of Croton *hirtus* of Ivory Coast shows the presence of terpene derivatives, monoterpenes and sesquiterpenes.[47]The toxicity of the essential oils found in *Crotonhirtus*, showed 50% lethal concentration. *C. hirtus* extract prevents NO-mediated inflammation by suppressingNF-κB and inflammatory cytokines.The methanolic extracts presented the highest 1,1-diphenyl-2-picrylhydrazyl (DPPH), 2,20-azino-bis(3-ethylbenzothiazoline)-6-sulfonic acid (ABTS), and ferric reducing antioxidant power (FRAP) values.[45],[48];[46] Its water, methanol and ethyl acetate extracts exhibited inhibitory effects on acetylcholinesterase (AChE) and butyrylcholinesterase (BChE), with a higher activity observed for dichloromethane, while the methanol extract showed the highest impact against *tyrosinase*.[46]

Brazilian sample of *Crotonlobatus* was reported to contain tertiary and quaternary alkaloids and hemolytic saponins. [49];[50] Compounds such as diterpenes; geranylgeraniol (**74**), triglyceride lobaricide (**75**) and triterpenes; betulinic acid (**76**) have been isolated from the stems and leaves of *Crotonlobatus* (Prota). In *Crotonlobatus*, betulinic acid (**76**) is said to be a potent HIV-1 antiviral compound and research have showed that *Crotonlobatus* inhibits the growth of plasmodium falciparum and geranylgeraniol (**74**) induces opoptosis in leukemia cell lines activity against strains that are sensitive to chloroquine as well as resistant ones (Prota), it is said to contain higher amount of anti-oxidant phytochemicals.[51] Its methanol leaf extracts retards arteriogenic risk factors therefore it can be used as herbal therapy for the treatment of diabetes mellitus and associated cardiovascular complication.[51] The ethanol leaf extracts of *Croton lobatus*shows the gastro-protective potential in albino rats.[52] Aqueous leaf extract of *C. lobatus*aids in the prevention of threatened abortion, management of pregnancyand infertility.[53] Tannins, triterpenoids, and saponin are reported to be responsible for its antimicrobial activity.[54]*Croton lobatus*leaf extracts could be used in diabetes and gout treatments, based on the antioxidant results of a-amylase inhibition and xanthine oxidase.[55]Methanol leaf extract of *Croton lobatus*possesses significant analgesic and anti-inflammatory activities.[56]

Crotonmacrostachyus is rich in terpenoids (diterpenoids and triterpenoids) and essential oils that contain monoterpenoids, sesquiterpenoids, and some shikimate-derived compounds. Previous studies showed the existence of crotin (a chalcone) (**77**), lupeol (**3**) (a triterpene), crotepoxide (**78**) (a cyclohexanediepoxide), proteins, fatty acids, saponins, resins and

alkaloids.[57] Some of the compounds isolated from *C. macrostachyus*include crotomacrine (**79**), halim-5,10-en-19,6β;20,12-diolide (**80**), floridolide (**81**), a labdane; crotomachlin (**82**) and four trachylobane diterpenoids; trachyloban-19-oic acid (**83**), trachyloban-18-oic acid (**84**), 3α,18,19-trihydroxytrachylobane (**85**), 3α,19-dihydroxytrachylobane (**86**) as well as four triterpenoids; betulin (**87**), a derivative of betulinic acid (**76**), acetyl aleuritolic acid (**88**), and sitosterol palmitate (**89**).*Cis*-clerodane (**90**) and 3β-Acetoxy tetraxer-14-en-28-oic acid (**91**).[17];[58]The essential oil extracted from the leaves confirm the presence of 69.16% terpenoids; Germacrene D (**43**), caryophyllene (**67**), 1-methyl-4-(6-methyhept-5-en-2-yl) cyclohexa-1, 3-diene (**92**), β – Capaene (**93**), β – Pinene (**94**), linalool (**95**) and α – Copaene (**96**) along with ester benzyl benzoate (**97**),hydrocarbons; Naphthalene (**98**) and Cyclododecane (**99**), heterocyclic compounds; Indole (**100**) and Piperidine (**101**),fatty acid; Hexadecanoic acid (**102**), and amine; Phenylephrine (**103**). [65]

Pharmacological studies shows that *Crotonmacrostachyus* has a wide range of pharmacological effects such as anti-diarrhea, and sedative, antidiabetic, anti-inflammatory, antileishmanic and larvicidal effects. *Crotonmacrostachyus* stem bark extract is active compared to studies in which anti-plasmodial activity has been implicated in a number of classes of secondary plant metabolites, including alkaloids and sesquiterpenes, inonoids, and quassinoids.[66];[17]*CrotonMacrostachyus* is effective against diarrhea.[67] The chemical constituent in *Crotonmacrostachyus*; terpenoids such as abietic acid (**104**) and steroids such as phytosterols (**105**) have been shown to inhibit the production of prostaglandin E2, which plays a crucial role in stimulating intestinal secretion and hence it has antidiarrheal activities. [68];[69];[17] The anthelmintic activity, the analgesic and anti-inflammatory effects of the aqueous and methylene chloride/methanol stem bark extracts, the antimicrobial and antifungal activities of the methanol and dichloromethane extracts of the leaves and stem, and the antibacterial and antileishmanial activities of the plant's essential oils were all confirmed by numerous pharmacological studies of *C. macrostachyus*, according to the report.[58] With minimum inhibitory concentration values of 3.75 mg/ml and 7.5 mg/ml, respectively, the methanol extract of *C. macrostachyus* demonstrated a strong effect in inhibiting the growth of tested isolates in both in vitro and in vivo settings. It also demonstrated stronger antibacterial activity against *S. aureus than E. coli*.[59]

The root bark of *Crotonmembranaceus* contains scopoletin (**106**) and julocrotine (**107**) (glutamiride Alkaloid). Traces of calcium oxalate crystals were also reported in its root bark.[12]Furano-clerodanediterpenoid; crotomembranafuran (**108**), labdanediterpenoid; gomojoside H (**109**), sitosterol; sitosterol 3-*O*-β-*D*-glucoside (**110**) and DL-threitol (**111**) are reported to have been isolated from its root extract. [4];[60] According to reports, *Crotonmembranaceus* exhibits antibacterial activity. Certain phase I metabolizing enzymes are induced and inhibited by *Crotonmembranaceus*, whereas phase II metabolizing enzymes are modestly induced.[61] According to in vitro studies, *C. membranaceus's* aqueous and organic stem extracts both exhibit some antioxidant properties.[62]

The seed extract of Croton *penduliflorus* shows the presence of fatty acid. Isolated from the root bark of West African croton *penduliflorus* is a halimanediterpenoid; Penduliflaworonsin (**112**).[4] In addition, julocrotine (**107**) and lupeol (**3**) was also reported from the West African *C. penduliflorus.*[63] Although essential oils derived from *C. penduliflorus* seeds have been shown to be hypocholesterolemic, they may also increase the risk of anemia. Investigation of the gastrointestinal effects and acute toxicity of the essential oils extracted from *C. penduliforus* seeds, revealed that the oil caused inflammatory reactions in the colon, ileum, and jejunum, as well as hypersecretions in every section of the gastrointestinal tract. Of the visceral organs, the

liver, lung, and myocardium were the most affected.[70][71] It has been shown that the methanolic extract of *C. penduliforus*seeds increases the concentrations of albumin, total protein, sucrose, and maltase in pregnant rats.[72] The chicks' foot pad oedema was considerably reduced by the hydro-ethanolic extract of *C. penduliflorus* stem bark.[73] In the agar-well diffusion method, the stem bark extract of *C. penduliflorus* shown activity against the Gram-negative bacterium P. aeruginosa but not E. coli, and against the Gram-positive bacteria *S. aureus, K. pneumoniae, E. faecalis, and B. subtilis.* [73]

The leaves of *Crotonpseudopulchellus* are found to contain taxalbumincrotin (**113**).[13];[74]Seven kauranediterpenoids, a labdane (**114-120**), three sesquiterpenoids (**36, 121-122**), triterpenoids (**88,123**) and stigmasterol (**124**). [4];[74]Phytochemical investigation of the root bark extract of *Croton pseudopulchellus*led to the isolation of five secondary metabolites namely, 18-methoxycarbonyl-18-methoxycarbonyl-15,16-epoxy-*ent*-cleroda-3,13(16),14-triene-,20,19-olide (megalocarpoidolide B) (**125**), 7,8-dehydrocrotocorylifuran (**126**), vitexin (**127**), lupeol (**3**) and acetyl aleuritolic acid (**128**).[75]The acetone extract of C. pseudopulchellus' aerial parts had a minimal inhibitory concentration (IC50) of 0.1 mg/mL against Mycobacterium tuberculosis, and a chloroform extract of the stem bark of the plant exhibited 82% minimum inhibitory activity at 50 mg/mL against PfUP1, a strain of Plasmodium falciparum that is resistant to chloroquine, and a minimum inhibitory concentration (IC50) of 3.45 mg/mL against the kidney cells of vervet monkeys .[4];[28];[74]Vitexin (**127**) showed antimicrobial activities with minimum inhibitory concentration and minimum microbicidal concentration values ranged between 16 and 32 µg/mL and interesting antioxidant properties very close to those of vitamin C and butyl hydroxyl toluene (BHT).[75]

The seed of *Crotonsylvaticus* is said to contain an oil composed of palmitic acid, stearic acid, linoleic acid and tiglic acid. Other research shows the presence of glutarimide alkaloid; julocrotine (**107**), lupeol (**3**) and penduliflaworonsin (**112**) in the stem bark and tannins in its bark.[12] The roots are reported to contain the toxalbumincrotin; a glycoprotein molecule that is attached to crotin, a dihydrochalcone (**130**) and glycosylated protein.[32]Hydrodistillation of the leaves is reported to have shown the presence of over fifty-two components including caryophyllene oxide (**15**) and α-humulen-1,2-epoxide (**131**).[76] β-sitosterol (**22**), stigmasterol (**125**) and a clerodanediterpenoid, hardwickiic acid (**132**) was been reported from the leaves of East African *C. sylvaticus*.[4];[76]Three labdane diterpenoids namely; 18-*nor*-labd-13(*E*)-ene-8α, 15-diol (**133**), labd-13(*E*)-ene-8α, 15-diol (**134**) and austroinulin (**135**) were isolated from the stem bark of *Croton sylvaticus*.[77]Hydrodistillation from *C. sylvatic*us leaves shows the presence of β-caryophyllene oxide (**15**) and α-humulene-1,2-epoxide (**131**) as the major constituents. [30];[31]Three compounds, namely 2-[N-(2-methylbutanoyl)]-N-phenyl-ethylglutarimide (**107**), lup-20(29)-en-3b-ol (**3**) and ent-(12R)-methyl-15.16-epoxy-9.10-friedolabda-5(1O),13(16),14-trien-19-oate20,12 lactone (**112**) were isolated from the leaves of *C. sylvaticus*. [17];[58]The phytochemical investigation of the leaf extracts of C. *sylvaticus*yielded a clerodanediterpenoids namely sylvaticinol (**136**) and 3-hydroxy-3-((Z)-4-hydroxy-but-1-enyl)-2,2,4-trimethyl-cyclohexanone (**137**).[41] Further phytochemicals analysis of the stembark and leaves of C. *sylvaticus*yielded trans-phytol (**138**), lupenone (**139**), 3β-acetoxylup-20(29)-ene (**140**), β-amyrin (**141**), lignoceryl trans-ferulate (**142**) and (+)-syringaresino (**143**).[74][78]Isolationof 3,3,4,5,7-pentahydroxyflavone (**144**) and 3,4,5,7-tetrahydroxyflavone (**145**) from methanol leaf extracts of *C. sylvaticus*was carried out.[41]

Previous research on *Crotonsylvaticus* shows the presence of antiplasmodial activity, low to high toxicity and the inhibitory of acetyl cholinesterase.[11] The aqueous methanol extracts showed anti-inflammatory and anti-oxidants activities.Both the water and methanol extracts of

*C. sylvaticus*exhibited very promising 5-lipoxygenase inhibitory activity.[12];[79]Hardwickiic acid (**132**) showed a significant antileishmanial activity on L. donovanipromastigotes.[80] The crude extract (1:1MeOH in CH_2Cl_2) was found to be active at the tested concentration of 10 µg/ml exhibiting cell inhibition of 86 % against drug sensitive leukemia cell.[77]

In *Crotonzambesiscus*, five flavone-C-glycosides, vitexin (**128**), orientin (**146**), vicenin-1 (**147**), saponaretin (**148**) and iso-orientin (**149**). [81] The leaves and bark of Benin and Cameroon *Crotonzambesicus* was reported to contain diterpenoids belonging to clerodane (**150-151**)labdane (**152**), kaurane (**153**).[63];[64]Trachylobane (**154-159**).[82]Pimarane(**160-161**).[64] Phytol (**162**) classes.[4] Other compounds reported from *C. zambesicus*include lupeol (**3**), betulinic acid (**76**), betulin (**87**) and sitosterol glycoside (**110**). Monoterpenes, sesquiterpenes, and aliphatic chemicals are present in the essential oils extracted from *CrotonZambesicus* leaves.[4] The antibacterial properties of *C. zambesicusha* stem bark have been investigated. Rats subjected to pyrethroid-based insecticides showed improved testicular health after consuming *Crotonzambesicus* leaf extracts.[80] Rats' fecal production increased significantly and dose-dependently when they were given *Croton zambesicus*root extract.[16] Benin uses *Croton gratissimus*burch. as an anti-malarial, anti-hypertensive, and antimicrobial to treat urinary tract infections.[65]*Crotongratissimus* leaf extract has positive effects on the immune system, liver, and kidney, making it a potential treatment for hypertension. *Croton gratissimusis* extracts have been shown to have potent antibacterial property.[4];[7];[83]*Croton gratissimus* showed strong antioxidant properties without any toxicity. [84]The methanolic leaf and stem extracts showed significant activity against a variety of bacterial isolates.[38]

CONCLUSION

The genus *Croton* is a member of the *Euphorbiaceae*. They are found in tropical and sub-tropical areas of both hemispheres and comprise 1,300 species of trees, shrubs, and plants. More than 292 species of the genus *Croton* are known to exist in Africa, whereas 11 species of the genus including *Croton gratissimus, Croton gratissimus* var. *gratissimus, Lobatus,hirtus, membranaceus, macrostachyus, penduliflorus, pseudopulchellus, sylvaticus*, and *zambesicus* are found in Nigeria. Found all throughout the world, croton species are most commonly used in traditional medicine to cure conditions like cancer, constipation, diabetes, dysentery, external wounds, intestinal worms, discomfort, ulcers, and weight loss.Nigerian *Croton* species have many ethnomedical applications and contain a variety of bioactive chemicals, such as terpenes, alkaloids, and flavonoids, which give them pharmacological properties like antibacterial, antileishmanial, antiplasmodial, antioxidant, and anticancer properties.
