| Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part. | Chemical-free farming practices, such as natural/organic farming aim to reduce external agricultural inputs of synthetic origin while relying on ecosystem management. In order to fulfill the food needs of expanding population, it has been determined that heavy use of pesticides, inorganic fertilizers and other inputs for maximizing agri-production is necessary. Achieving a balance and sustainable food production is a challenging issue for the increasing food demand of rapid population growth. Keeping this in view, the present study assumes significant importance with regard to ascertaining through economic lens the sources of growth of returns in paddy cultivation under natural farming and conventional farming, so as to bust the myths associated, and to convince the farmers, policy makers, and other stakeholders about the benefits that accrue from zero budget natural farming. | |
