This publication provides a thorough analysis of the function of gold exchange-traded funds (ETFs) in stabilizing financial markets during times of economic crisis, which makes it important for the scholarly community. By investigating their impact on economic repression and price discovery mechanisms, the study advances knowledge of how contemporary financial instruments affect conventional market behaviours. Policymakers, investors, and economists can all benefit from the findings, which provide useful information for reducing financial instability. It gives the academic discussion of financial innovation in relation to macroeconomic resilience a new angle.
