

Review Form 3

Journal Name:	Asian Journal of Research in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_AJRIMPS_129047
Title of the Manuscript:	The Underrecognized Burden of Hypogonadism in Physical Medicine and Rehabilitation: Implications for Anabolic Therapeutics
Type of the Article	Letter to the Editor

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	The manuscript is a letter to the editor about the impact of diseases in the field of physical medicine and rehabilitation on testosterone levels in affected men. It does not specify the etiologies of said hypogonadisms, which we know are frequent and of hypothalamic or pituitary origin. It refers in a very general way to said association, and does not contribute anything that is not already known on the subject. It specifies in more detail the impact of testosterone deficiency on the muscles, and raises the usefulness of using androgens (or androgenic anabolics) in the recovery and lower long-term morbidity of patients. However, this has been known for a long time and does not provide any newer point of view. More specific pathophysiology is needed, in addition to the fact that the use of these anabolics and androgens can further delay the recovery of the hypothalamus-pituitary-gonadal axis, whose condition is multi-causal. It would be better to use non-steroidal anabolics or growth hormone, or even androgens such as dihydrotestosterone, which do not affect the axis.	
Is the title of the article suitable? (If not please suggest an alternative title)	The Underrecognized Burden of Hypogonadism in Physical Medicine and Rehabilitation: Implications for Anabolic Therapeutics I don't think it's an appropriate title. It should be more about the impact of the suppression of the hypothalamus-pituitary-gonadal axis in Physical Medicine and Rehabilitation	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	abstract is comprehensive	
Is the manuscript scientifically, correct? Please write here.	The manuscript's approaches are correct, however need revision especially in terms of pathophysiology.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	There are only 10 references, very general, I suggest looking for more specific references on the pathophysiology	
Is the language/English quality of the article suitable for scholarly communications?	ok	
<u>Optional/General</u> comments		

Review Form 3

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
