

Review Form 3

Journal Name:	Current Journal of Applied Science and Technology
Manuscript Number:	Ms_CJAST_128452
Title of the Manuscript:	Study some immunological parameters In Iraqi patient suffering from cholecystitis in AL-Anbar province
Type of the Article	

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript addresses an important topic by exploring the levels of IL-12, IL-13, and macrophage inflammatory protein (MIP) in Iraqi patients suffering from cholecystitis. These biomarkers are not only pivotal for understanding the inflammatory process but could also serve as diagnostic and prognostic indicators for the condition. The findings contribute to the broader knowledge of immune responses in gallbladder diseases and could potentially guide therapeutic strategies.	
Is the title of the article suitable? (If not please suggest an alternative title)	The current title, "Study some immunological parameters In Iraqi patient suffering from cholecystitis in AL-Anbar province," is somewhat vague. A more specific and scholarly title could be: "Evaluation of IL-12, IL-13, and MIP Levels in Iraqi Patients with Cholecystitis in Al-Anbar Province"	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract provides a good overview but could benefit from minor revisions to improve clarity and comprehensiveness: <ul style="list-style-type: none"> • Mention the significance of the findings in clinical practice. • Include the observed correlations and their potential implications. Suggested revision: Add a statement about the negative correlation between age and cytokines and highlight the significant findings regarding WBC count and biomarkers.	
Is the manuscript scientifically, correct? Please write here.	The study appears scientifically sound, with clear methodology and statistical analyses. However, further clarification of how chronic and acute cases were confirmed diagnostically might strengthen the scientific rigor.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references are mostly sufficient and include recent studies. However, a few additional studies on cytokine roles in inflammation and immune responses specific to cholecystitis could enhance the discussion. Suggestions for Additional References: <ul style="list-style-type: none"> <input type="checkbox"/> Explore recent meta-analyses or reviews on cytokine biomarkers in inflammation. <input type="checkbox"/> Include studies focusing on the regional or demographic variance in immune responses to cholecystitis. 	
Is the language/English quality of the article suitable for scholarly communications?	The language is mostly clear but needs minor corrections for grammar and formal scholarly tone, such as replacing "some" with "specific" and improving sentence structures for better readability.	
Optional/General comments	<ul style="list-style-type: none"> <input type="checkbox"/> Consider adding more context in the discussion regarding how these biomarkers could be utilized in treatment strategies or patient management. <input type="checkbox"/> Include a brief description of the potential limitations of the study. 	

Review Form 3

PART 2:

	<u>Reviewer's comment</u>	<u>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</u>
<u>Are there ethical issues in this manuscript?</u>	<u>(If yes, Kindly please write down the ethical issues here in details)</u>
