Title of the Manuscript:	Assessing land use land cover of Srinagar Municipal Region using Sentinel-2 data for urban planning and management
Type of the Article	

**PART 1: Comments**

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.</b>	Information related to landuse land cover of any area using remote sensing and GIS is could be assessed quickly. This manuscript would gather a general information on landuse land cover of the study area. Would serves as cross information of assessed data for other researcher how will study the LULC of the same region.	
<b>Is the title of the article suitable? (If not please suggest an alternative title)</b>	Title "Assessing land use land cover of Srinagar Municipal Region using Sentinel-2 data for urban planning and management" is could be revised as this manuscript provide only information about the LULC of the study area and do not provide information about and suggest measure of urban planning management. Could be similar to the "Land use land cover assessment of Srinagar Municipal Region using remote sensing and GIS technology".	
<b>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</b>	The author used many thematic keywords in first four-five lines of the abstract. In spite of this it could be straight forward and may smoothly describe the purpose, methodology and results. Although the rest of lines are okay.	
<b>Is the manuscript scientifically, correct? Please write here.</b>	The manuscript provides general information on landuse land cover classification obtained through remote sensing. If possible for the author please mentioned:- 1. What classification approach he has used like supervised or unsupervised. 2. If possible include the reference or approach through which he has selected 13 classes for the study area 3. mention level of classification i.e. level -I or level -II 4. Sentinel data is freely available so delete "procured" word 5. mention month of the satellite image with year	
<b>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</b>	If possible for author please include any reference/information available which could validate the obtained results under different landuse land cover in his study area In discussion include 2-3 most relevant references particularly J&K landuse land cover studies to support his outcome.	
<b>Is the language/English quality of the article suitable for scholarly communications?</b>	Need to relook over the grammar and sentences. The words are joined with another in some paragraph.	
<b>Optional/General</b> comments	<b>Suggested points should certainly improve the quality of manuscript and hopefully author will comfortable in addressing these observations. Although the author has made a good efforts to work with modern technology</b>	

**Review Form 3**

**PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Are there ethical issues in this manuscript?</b>	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
