

### Review Form 3

Journal Name:	<a href="#">Journal of Scientific Research and Reports</a>
Manuscript Number:	Ms_JSRR_128553
Title of the Manuscript:	The Cultivation of Chamomile ( <i>Matricaria chamomilla</i> L.) in India: Insights into Origin, Distribution, and Germplasm Availability for Effective Farming Practices
Type of the Article	Review Article

#### General guidelines for the Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guidelines for the Peer Review process, reviewers are requested to visit this link:

<https://r1.reviewerhub.org/general-editorial-policy/>

#### Important Policies Regarding Peer Review

Peer review Comments Approval Policy: <https://r1.reviewerhub.org/peer-review-comments-approval-policy/>

Benefits for Reviewers: <https://r1.reviewerhub.org/benefits-for-reviewers>

#### PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.</b>	This manuscript provides valuable information on the cultivation, characteristics and pharmacological benefits of chamomile, a plant with significant medicinal and industrial potential. His findings contribute to a growing body of knowledge about sustainable agricultural practices, including soil management, irrigation and the impact of environmental factors on chamomile production and quality. Detailed exploration of chamomile biochemistry, cultivation techniques, and pest management strategies will be beneficial to researchers and farmers seeking to optimize chamomile production. In addition, the manuscript highlights the economic opportunities associated with chamomile, particularly in India, promoting its cultivation as a viable commercial crop with high market demand globally.	
<b>Is the title of the article suitable? (If not please suggest an alternative title)</b>	The title is appropriate for the article.	
<b>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</b>	Here are some general suggestions that could improve your summary: <ul style="list-style-type: none"> <li>✓ The abstract should clearly highlight the main topics of the manuscript, such as: <ul style="list-style-type: none"> <li>- The medicinal and commercial importance of chamomile.</li> <li>- Detailed aspects of its cultivation, including soil and climate requirements.</li> <li>- Biochemical composition, especially active compounds and potential health benefits.</li> <li>- The economic and commercial value of chamomile, with emphasis on its potential for large-scale production.</li> </ul> </li> <li>✓ It may be useful to briefly mention threats to wild harvesting, environmental impacts, or market issues that may provide context for cultivation suggestions.</li> <li>✓ Mention of potential application: Highlighting the commercial viability of chamomile cultivation for countries with suitable climates can emphasize the practical aspect of the research.</li> <li>✓ Specific results or findings: These should be briefly mentioned in the abstract to give the readers a clear idea of the results of the study (e.g. optimal temperatures for cultivation or key bioactive components).</li> </ul>	
<b>Is the manuscript scientifically, correct? Please write here.</b>	Yes, the scientific content is correct.	
<b>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</b>	Even if 10 sources out of 37 are published before the 2000s, the bibliographic references are representative of the study.	

**Review Form 3**

<p><b>Is the language/English quality of the article suitable for scholarly communications?</b></p>	<p>The manuscript is written in a style suitable for scholarly communication, with appropriate technical vocabulary.</p>	
<p><b>Optional/General</b> comments</p>	<p>The manuscript uses appropriate technical and scientific terminology, such as "bioactive components," "essential oil extraction," and "integrated pest management." This is essential for scholarly work in the fields of agronomy, biochemistry, and plant science.</p> <p>The manuscript brings important and useful information to researchers and practitioners in the fields of agronomy and natural medicine, but does not propose major innovations in science. Rather, it reiterates well-documented practices and reinforces the applicability of chamomile in sustainable agriculture and natural medicine.</p> <p>Some sentences are long and can be difficult for readers to follow. Breaking up longer sentences into shorter sentences would improve readability and make the information easier to understand.</p> <p>The manuscript uses both the common name "chamomile" and the scientific name <i>Matricaria chamomilla</i> interchangeably. A consistent choice of terminology would make the text more coherent.</p> <p>Certain information is repeated in different parts of the manuscript, especially regarding recommendations for planting distances.</p> <p>In certain parts of the manuscript, more specific examples or case studies could be useful to support the claims made. These examples would strengthen the arguments and give more credibility to the text.</p>	

**PART 2:**

	<p><b>Reviewer's comment</b></p>	<p><b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p><b>Are there ethical issues in this manuscript?</b></p>	<p><i>(If yes. Kindly please write down the ethical issues here in details)</i></p>
