

Editor's Comment:

I accept the manuscript for publication in the International Astronomy and Astrophysics Research Journal.

Considering the reviewer's recommendations and the author's corrections, we can publish this manuscript. The reasons are as follows:

1. One of reviewers gives comment such as "The manuscript explores the seasonal and annual variations of Equatorial Electrojet (EEJ) and Counter Electrojet (CEJ) strength at two key locations in Africa, namely Addis Ababa and Mbour. It uses robust geomagnetic data and provides valuable insights into these variations, contributing to understanding the relationship between geomagnetic phenomena and solar activity"
2. One of reviewers gives comment such as "The article by the author(s) is technical and aimed primarily to researchers in the field, but it may have an application practical application, especially for satellites. The paper has been produced with acceptable and clear and even the graphs, essential in their realization, are acceptable and explanatory of the phenomena described."
3. Three reviewers give comments such as "Accept after minor revision".
According to the comments, the authors have corrected the paper carefully.
Therefore, the paper has enough value for publication in the International Astronomy and Astrophysics Research Journal.

Editor's Details:

Prof. Magdy Rabie Soliman Sanad

National Research Institute of Astronomy and Geophysics, Egypt.
