<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.</b>	The next pandemic may not be caused by a novel virus but by the escalating threat of antimicrobial resistance (AMR). As bacteria and other pathogens evolve to resist existing drugs, the efficacy of life-saving antibiotics is dwindling. This crisis poses severe challenges for the scientific community, demanding urgent innovation in drug development, diagnostic tools, and public health strategies. The social implications are profound: increased mortality rates, strained healthcare systems, and deepening inequalities, as marginalized populations bear the brunt of AMR-related infections. Collaborative efforts across disciplines and borders are essential to mitigate this looming global health threat
