Review Form 3

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript is of significant reputation to the scientific community as it addresses the growing alarm of photoaging, particularly in tropical regions like Indonesia, where chronic UV exposure is common. By exploring the potential of goji berry extract as a natural antioxidant, the review highlights a promising secondary photoprotection strategy to complement conventional sunscreen use. The findings underscore the relevance of natural compounds like lycium barbarum polysaccharides, flavonoids, carotenoids, and phenols in combating oxidative skin damage induced by UV radiation. This work contributes valuable insights for future research into alternative photoprotection methods and encourages further investigation into the optimal usage of goji berry as a skin-aging remedy.	
Is the title of the article suitable? (If not please suggest an alternative title)	Goji Berry (Lycium barbarum) Extract as a Potential Anti-photoaging Agent: A Literature Review	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Here are some suggestions: <ol style="list-style-type: none"> Introduction and Problem Statement: The abstract starts with the context of Indonesia's exposure to sunlight, but it could benefit from a clearer statement of the broader significance of photoaging in tropical regions, not just Indonesia, as this can be applicable to many countries with similar climates. Methods Clarification: It would be helpful to briefly mention the type of studies reviewed (e.g., clinical trials, in vitro studies, etc.), which would add more context to the research scope and depth. Findings: While the abstract touches on the potential of goji berry extract, adding a bit more detail about the specific mechanisms or results observed in the studies would provide a clearer picture of the compound's effects. Conclusion and Future Directions: The conclusion could be strengthened by emphasizing the potential implications of the findings for the skincare industry or public health, particularly regarding the development of new photoprotective treatments. 	
Is the manuscript scientifically, correct? Please write here.	correct	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	No	
Is the language/English quality of the article suitable for scholarly communications?	Good	
Optional/General comments	No	

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
