Title of the Manuscript:	INFLUENCE OF NEW GENERATION PLANT GROWTH REGULATORS AND FRUIT BAGGING ON ORGANOLEPTIC PROPERTIES OF GUAVA (<i>Psidium guajava</i> L.) cv. G-27
Type of the Article	Original Research Article

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	PBRs like salicylic acid and brassinosteroid have been identified as new upcoming class of hormone which have provided promising results in many other fruit crops, however using these chemicals results in improvement of quality parameters. The visual parameters are affected by insect attacks and other pathogens, this was prevented by use of bagging materials. So, combining both these PBRs at specific concentration with suitable bagging material resulted in production of best quality fruits.
