

Review Form 3

Journal Name:	Asian Research Journal of Agriculture
Manuscript Number:	Ms_ARJA_128198
Title of the Manuscript:	Catologue of Insect Bio-diversity in High Density Guava after Trash Mulching
Type of the Article	

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.		
Is the title of the article suitable? (If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.		
Is the manuscript scientifically, correct? Please write here.		
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.		

Review Form 3

<p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<p>Reviewer's Comments</p> <p><u>Title</u></p> <p>The title of the study has no study area.</p> <p><u>Introduction</u></p> <p>The manuscript does not contain a global perspective of the subject matter under investigation, as evidenced by the references which indicate works that appear to have been conducted almost in Asia, particularly India. It would be helpful to explore existing literature in both tropical and sub-tropical regions. It is very important to state a clear objective of the study and the gap (s) to be filled.</p> <p><u>Materials and Methods</u></p> <p>The Global Positioning System (GPS) of the study area ought to have two latitudes and two longitudes, within whose four intersections the area lies. A latitude and a longitude locate just a point. In addition, a good map of the study area will add value to the quality of the research report. State the values of the meteorological data: maximum and minimum temperature (^oC), relative humidity (%), annual precipitation (mm) and sunshine (hours), highlighting its relevance to the study.</p> <p><u>Results and Discussion</u></p> <p>Provide a deeper insight into the implications of the results. For example, what are the implications of reduced pH and increased moisture content on guava growth and production? Carefully discuss how <u>each</u> of your findings align with or diverge from previous studies on catalogue of insect bio-diversity in fruit trees in similar regions. Highlight any novel insights or contributions your study brings to the body of knowledge in the field.</p>	

PART 2:

	<p>Reviewer's comment</p>	<p>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
