

Review Form 3

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_129695
Title of the Manuscript:	Gibberellins A4/7, 6-Benzylaminopurine and Prohexadione Calcium Modify Growth, Development and Quality of Raspberry
Type of the Article	Original Research Article

General guidelines for the Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guidelines for the Peer Review process, reviewers are requested to visit this link:

Important Policies Regarding Peer Review

Peer review Comments Approval Policy: <https://r1.reviewerhub.org/peer-review-comments-approval-policy/>

Benefits for Reviewers: <https://r1.reviewerhub.org/benefits-for-reviewers>

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	The manuscript has a brief insight of the effects of bioregulators on raspberry cultivation. This study is mainly focused on effects of prohexadione calcium (P-Ca), gibberellins A4/7 (GA4/7) and 6-benzylaminopurine (6-BAP) in raspberry. This research has the potential to leading to improved crop management strategies and better fruit yield, also have practical application for raspberry producers. In broad sense, this findings also has contribution to the scientific knowledge of plant hormone interaction and their role in fruit development and this can be implied to other horticultural crops also.	
Is the title of the article suitable? (If not please suggest an alternative title)	Yes, the title is suitable as the title is informative and aligns well with the objective and result present in the abstract and throughout the manuscript.	

Review Form 3

Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Yes, it is covering the major keypoint.	
Is the manuscript scientifically, correct? Please write here.	Yes, the manuscript sounds good. It has a well-defined experimental design, appropriate methodology and with crucial parameters. The result also indicates the effects of selected bioregulators on the measured parameters. The statistical analysis performed are appropriate to for determining the significance of the result, also it has good reference of previous studies.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The reference provided in the manuscript are mostly recent like around last few years. But it will be better to give some recent reference for example from 2023/2024 articles. Also, they might consider including market trend or economic impact related to bioregulator use in the manuscript.	
Is the language/English quality of the article suitable for scholarly communications?	Yes, its suitable for scholarly publication, but there are some occasional grammatical errors. Some places lack of clarity and suitable punctuation.	
<u>Optional/General</u> comments	No plagiarism is suspected. ethical issues- No. The plant material and chemical was in within normal parameters. Also it was done in controlled greenhouse environment, which minimizes environmental impact.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
