

Editor's Comment:

I managed to review the materials. It is my opinion that the author has followed the recommendations of the reviewers to the fullest extent.

In my view, having specific objectives and research questions is an unnecessary tautology. It is better to keep only the research questions. Last, I don't understand why an apostrophe is placed after learners everywhere in the text. I would recommend paying attention to the above two notes.

I think that the article can be published.
