

Review Form 3

Journal Name:	Asian Journal of Cardiology Research
Manuscript Number:	Ms_AJCR_129198
Title of the Manuscript:	THE EFFECT OF TAVI ON LEFT ATRIAL FUNCTION AND HEMODYNAMICS
Type of the Article	Original Research Article

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This study has proven to be scientifically valuable. Positive hemodynamic changes in patients undergoing TAVI are an expected reality but proving this with scientific data is a significant achievement.	
Is the title of the article suitable? (If not please suggest an alternative title)	Suitable	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Yes, it is comprehensive	
Is the manuscript scientifically, correct? Please write here.	Except for a few shortcomings, I found it scientific.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	They are enough.	
Is the language/English quality of the article suitable for scholarly communications?	suitable	
Optional/General comments	<p>1-First of all, the number of patients could have been higher.</p> <p>2-In this study, the effects of valve problems other than aortic stenosis on these systolic, diastolic functions of left ventricle and atrial functions have not been clearly specified. Particularly regarding issues with the mitral valve, it should be clarified whether it is a functional mitral regurgitation or an organic mitral regurgitation. This distinction is important because if it is functional rather than organic, the improvement in functions due to the reduction of mitral regurgitation after TAVI should be highlighted. I believe it would be more appropriate to demonstrate this through a multivariate analysis.</p>
