

Review Form 3

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_129674
Title of the Manuscript:	A Comparative Study to Assess Medication Adherence of Patients with Communicable and Non-Communicable Diseases attending Primary Health Centres, a rural hospital in India
Type of the Article	

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript provides critical insights into medication adherence among patients with communicable and non-communicable diseases in rural India. It sheds light on demographic factors influencing adherence and highlights actionable areas for intervention to improve healthcare delivery. This study is invaluable for developing targeted health policies, especially in resource-constrained settings.	
Is the title of the article suitable? (If not please suggest an alternative title)	The title is clear and descriptive, accurately reflecting the study's scope. No changes are required.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract effectively summarizes the study. However, it could benefit from briefly mentioning the key findings related to demographic variables, such as age and employment status, to provide a more comprehensive overview.	
Is the manuscript scientifically, correct? Please write here.	The study appears methodologically robust, with appropriate use of tools like the MARS scale. The statistical analysis is clear, and the discussion aligns with the results. However, some data presentation (e.g., tables) could be more concise for improved readability.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references are adequate and include recent and relevant sources. A suggestion would be to include additional references related to global studies on medication adherence for broader context.	
Is the language/English quality of the article suitable for scholarly communications?	The manuscript's language is generally suitable for scholarly communication but requires minor grammatical corrections for smoother readability. For instance, phrases like "careless approach" could be refined to "lack of attention to medication schedules."	
Optional/General comments	Consider elaborating on the implications of the findings for healthcare policy and interventions. Additionally, it would be helpful to provide specific recommendations for improving adherence among unemployed and less educated groups.
