Optional/General comments	<p>It would be interesting to know the parameters of their study, for example, the number of individuals they interviewed, how long the interviews were and some sample questions since this is a qualitative study. It is difficult to determine the scope of the study without some basic descriptive and demographic data: age, sex, etc.. of the participants in the study. Further elaboration of data triangulation specific data elements would be useful as well as the data analysis plan with data reduction examples would help to provide the blueprint for this study.</p> <p>It would also be interesting to know if there was any relationship between compliance and the level of training undertaken.</p> <p>It would be important to provide a bit more specifics related to the training intervention that participants are engaged in. It was difficult for me to wrap my head around what was involved in the training and what was being monitored on an ongoing basis.</p> <p>I think this is an important study which could demonstrate relationships between compliance and training systems but it just needs more clarity related to the actual training intervention</p>
