Review Form 3

<p>Is the language/English quality of the article suitable for scholarly communications?</p>	<p>yes</p>	
<p>Optional/General comments</p>	<p>Need major improvements in data and data representation.</p> <p><i>Dear Editor,</i> <i>The manuscript is well written but there are some major issues, which should be corrected first, and manuscript should be resubmitted. In the current situation manuscript, need more improvement.</i></p> <p><i>There are some concerns</i></p> <p>1. <i>The total numbers of population based the MUNICIPALITY OF BELÉM should be reported and based on the age group data should be given.</i></p> <p>2. <i>Number of cases are more in age group 60 to 69 , might be majority of population belongs to this age group in elderly population .</i></p> <p>3. <i>Data presented in table 1 have some errors . should be corrected.</i></p> <p>4. <i>Author claiming that most of the cases happened with females population and reason because they were active and busy with household activity but during covid “restricted the movement of people in risk groups” this statement is given. And it further justify the situation of 2020 as reported less number of cases. Its seems bit contradictory. Most of the people were restricted in homes around covid so it need more household stuff, should have more household cases for women population. However, data shows a different picture. Please explain.</i></p> <p>5. <i>Current study is seems biased based on other findings “Carvalho et al. (2019) on the characterization of the profile of hospitalizations among the elderly due to external causes found that the majority of hospitalizations involved men compared to women, in the age group of 60 to 69 years, with a predominance of Black and Brown individuals.”</i></p> <p>6. <i>Conclusion should be more details, more concrete. Author discuss quite little about the whole findings.</i></p> <p>7. <i>Spelling mistakes should be checked.</i></p> <p>8. Major concern: <i>If fall seems to be a major cause of external cause for cases, why not author, make a separate column for fall cases. To make the picture clearer and to develop policies based on these finding.</i></p>	

PART 2:

	Reviewer’s comment	Author’s comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
