

Editor's Comment:

Please get this manuscript (2021/AJAEES/80614) revised by the authors to improve its quality as well as to maintain the quality of the journal.

Results and discussion section should be improved by adding some data tables or data figures related to the 9 parameters discussed in the results (collection of chinara leaf litter, packing & transportation of chinara leaf litter etc.). If interviews were conducted then please provide data related to these interviews. The study is a good effort to highlight ITK and traditional interventions and to streamline advanced technology integration in those ITKs.

Please send me revised version of the manuscript for final decision.
