

Editor's Comment:

I checked very carefully the manuscript 2022/AJAEES/88892, the reviewers' reports and the revised manuscript. The authors cover partly the comments and suggestions of reviewers and in my opinion, the manuscript presents significant weaknesses. The introduction section and the Methodology are very brief and missing important elements of a scientific article. The Discussion of results is also limited. Generally, an article that is based on secondary data is better organized and structured. So, my decision is to reject this paper.
