

Editor's Comment:

I have gone through the revised articles and feedback of reviewers and found that

- There are a lot of things to be revised such as the Abstract should be revised in brief without complete methodology and sample collection.
- The author has done biochemical tests of isolated bacteria and they were screened to degrade crude oil.
- The manuscript is full of typographic errors, not following the rules of ICBN while naming the bacteria and plants, and journal-style in references.

- **After these corrections, the paper should be accepted for publication.**
