

Editor's Comment:

Despite that authors followed the reviewers recommendations, there are some others details necessities to clarify in order to improve paper to be able for publication.

1. Third paragraph of introduction is not necessary, since only talk about site location, this is better to put in Material and Methods.
2. In introduction is necessary to provide a fisheries description. Paper do not provide a description of it.
3. First paragraph of Material and Methods in unnecessary. Instead of it, authors need to describe in detail the data source and data characteristics.
4. In table 1 average need a deviation estimator.
- 5 I suggest the addition of a map of the study area.
6. Figures 1 to 4 can be summarized in a table.
7. Results and discussion section is lack of a discussion, additionally for a good discussion I suggest a comparison with other similar research. I believe that 13 cites reflect a poor bibliographic revision to support paper, then I suggest to make a more broad bibliographic revision.
