

Editor's Comment:

I reviewed the new version of the paper entitled: "CONTRIBUTION OF THE FISHERY SECTOR TO REGIONAL DEVELOPMENT IN BANDUNG REGENCY, WEST JAVA PROVINCE, INDONESIA" and my observations are the following:

1. Third paragraph of introduction is not necessary, since only talk about site location, this is better to put in Material and Methods.
2. In introduction is necessary to provide a fisheries description. Paper do not provide a description of it.

This two points were covered by author. However they do not display clear the objective or the hypothesis research.

3. First paragraph of Material and Methods in unnecessary. Instead of it, authors need to describe in detail the data source and data characteristics.

This is ok

4. In table 1 average need a deviation estimator.

This was not added

- 5 I suggest the addition of a map of the study area.

This was a suggestion only, all ok.

6. Figures 1 to 4 can be summarized in a table.

If this data are in table 2, then figures are not necessities, then they need to delete from paper.

7. Results and discussion section is lack of a discussion, additionally for a good discussion I suggest a comparison with other similar research. I believe that 13 cites reflect a poor bibliographic revision to support paper, then I suggest to make a more broad bibliographic revision.

These suggestions were not covered at all. Discussion has not present a comparison with similar studies and they appear as data description only.

In my professional point of view suggestions were not taken in account at all, authors need to work more in it after a final publication of your research. However, I will consider your final decision about it.
