

### **Editor's Comment:**

I can conclude the following  
Comments

The manuscript is weak for the following points:

- The size of data is low (only 7 VES).
- References are little and most of them are old, the author didn't used up to date references
- Problems in language and editing
- The VES measurements and borehole logs are well linked and correlated.
- No clear correlation between the results of geoelectrical results and sedimentation and paleoenvironment has been depicted
- The last 3-lines in the abstract are not clear.
- Figure 1 is not clear, and there is no reference for the figure.
- The geological map is very simple and it can not be published in this form and simplicity.
- Figure 1 and 3 are the same,
- The location of Boreholes is not clear in any map
- No need for the equations 1 to 3.
- No explanation for the software used in this study (RESIST).

So, I recommend that you reject the manuscript.
