

Editor's Comment:

I have read and compared the various manuscripts of the article and I have noticed that there are still some remarks which have not been taken into consideration, specially:

3) Take few samples within the areas predicted by the kriging and IDW methods and plot them on the produced map to verify the accuracy of their predictions. In this case, you must also present the table of sample's results

5) There is no comparison of your results with similar works done in the study area or elsewhere.

Moreover, it is necessary to check the exactitude of the North and East directions of produced maps (East is always to the right of North)

However, I confirm once again that it is an interesting article and which deserves to be published
