

Editor's Comment:

The presentation of this article is miserable. The literature review is unbelievable and manages to have nothing to do with the purpose of the paper.

Section 3 is divided into subsections which content is just calculations without any text. In section 3.1 we have a "proof" for which there is no statement (it's the first time I've seen such a thing). And, moreover, it's not a proof, it's just a mere calculation.

The motivation for building the distribution is poorly explained.

Virtually none of the reviewers' suggestions were considered. And what little it was, it was just fattening up the abstract, which thus lost its abstract characteristics.

The conclusions are uninteresting and the bibliography very poor.

The writing is disastrous in style and full of typos.

This manuscript cannot be published in AJPAS.
