

Editor's Comment:

The subject of the review is of practical interest and the manuscript is informative in this respect.

The suggestions of the Reviewers have been duly considered by the Authors and **I consider the revised manuscript as ready to be accepted for publication in AJRAVS.**

Yet, some additional remarks of detail would still improve the manuscript:

* in the Abstract, the phrase "Out of 713, 19 studies with total individual 1132538 were subjected to meta-analysis" should be more clear: please be more explicit by saying that the "19 studies addressed a total number of 1132538 individuals from the whole livestock"

* in the Abstract also, please make due correction in : "13.4% (95% CI 10.8–**16.0.6**)"

* in section 4.2. it might be useful to provide the signification of "C.I.", by explicitly designing its significance as "Confidence Interval" (although I agree that many readers would not need this precision)
