

Editor's Comment:

The manuscript is informative about a subject that might be of potential practical interest.

Yet, the authors have not sufficiently taken into account some suggestions which, in my opinion, seem of actual relevance, among those proposed by the Reviewers.

In particular, the title of the manuscript should be rephrased to mention the experimental contribution - which definitely frames the "bio-economic" modelling - while reducing in the same time the details regarding the precise localization of the study (which have comparatively minor significance for the study).

In this line, I strongly suggest to the Authors the following rephrased Title:

"BIO-ECONOMIC MODEL OF HALAL GOAT PRODUCTION SYSTEM BASED ON EXPERIMENTALLY COMPARING FEEDING WITH MADRE DE CACAO AND/OR WITH IPIL-IPIL (MAGUINDANAO PROVINCE, PHILIPPINES)"

In the Abstract, please complete the following phrase as mentioned:

'Analysis of variance (ANOVA) at 1% confidence level was also employed to determine the degree of significance of the observed differences among treatments.

Also, the ethical statement is lacking at the end of the manuscript and should be added.

After these corrections are achieved, I consider that the manuscript can be published in AJRAVS.
