

Editor's Comment:

Thanks very much for sending the reviewed manuscript (2021/ARRB/76537) entitled, "**Inventory of animal contamination by cyanotoxins in Africa**" for taking a final decision. Indeed, this is a good piece of review work related to the accumulation of cyanotoxins in fish and various animals in Africa. However, while reading the manuscript, I found that the authors have done good jobs during revisions as well as improved the manuscript based on comments/suggestions raised by the reviewers. However, there are still some places where the wordings are not grammatically correct, which are required to be corrected as well as overall English need to be improved. It will be even better if the geographical location of the study areas in Africa can be shown in a Figure with descriptions in the text and the collected data/information can be summarized in a Table. In addition, the whole text including the citations and references should need to be formatted and arranged according to the prescribed format of the journal.

Accepted with minor corrections.
