

Editor's Comment:

I looked through all the reviewer comments . Need minor changes.

--The changes in the revision need to be highlighted in the manuscript so that it is easier for us to know the corrections. mainly showing the RV/LV differentiation

---We need the echo videos with color flow doppler

--conclusions should not have the references. Please discuss the prognosis in the discussion and use the reference in the discussion. Expand PA-IVS

--Point with an arrow to show the cardiomegaly in the CXR

-- point where is UTO. Also point where is the bicuspid valve in the figure 5 as mentioned in the description
