

**Editor's Comment:**

The subject of the review is of obvious interest and the revised manuscript deserves being published.

Yet, I invite the three authors to undergo a serious final proofreading of their manuscript which may still contain some inaccuracies. For example, in the section "Threats to Biodiversity" one can read:

*'Thuiller (2007)[17] has stated that each 10°C rise in temperature will lead to shifting the zone of occurrence of several specialist species by 160 meters vertically and 160 km horizontally.*

In fact, it is of course 1°C and not 10°C.

Otherwise, the manuscript is well written.
