

**Editor's Comment:**

After visiting the reviewers' comments and revised manuscript, my comments are:

1. The title does not reflect the write-up given in the manuscript.
2. The author/s misjudges the terms 'drinking water', 'pure water', and many more in the manuscript.
3. Some guidelines should be followed while writing a review article. The manuscript lacks methodology.
4. The manuscript has no scientific value and should not be published in its current form.
5. The manuscript should be rejected or sent for review by an expert scientist.
