

Editor's Comment:

- First of all, I'd like to thank everyone who took the time to look over this research paper No 2022/IJECC/89958 title: Performance of turmeric (Curcuma longa L.) Genotypes on growth and yield under Prayagraj agro-climatic zone, your comments were helpful.
- Based on the reviewers' comments and our own reading of the manuscript, our decision is to **conditionally accept the paper for publication** in **International Journal of Environment and Climate Change**
- **Also,** this is : Original Research Article not Article Review, Contrary to what is indicated in the first line of the search while approaching from the right.
- **The present study was not prepared in a sensible English language, and it certainly lacks efficient and effective grammatical structures. As little more than a result, the study has to be redone again while adhering to the standards that are associated with formulating a research paper in ways that are consistent with grammatical concepts. The text receives a score of thirty out of a possible hundred. This score is intended to reflect the professionalism of the writing found inside this document.**
- Because we want to demonstrate how enthusiastic we are about the article, we are willing to give you conditional acceptance.
- Unfortunately, we also want to make it quite clear that this acceptance is subject to certain conditions, and that there is still work to be done to get the text ready for what we hope will be its ultimate publication.

It will be exciting to have your work published in the International Journal of Environment and Climate Change.
