

Editor's Comment:

We carefully analyzed the review process, the reviewers' recommendations and the final paper. The reviewers made important recommendations for improving the paper. Unfortunately, the authors did not make all these improvements. Analyzing the original paper and the final paper, it is found that the improvements required by the reviewers have been made, only partially. Consequently, the paper cannot be accepted for publication. It is necessary for the authors to improve the paper, to respond to the requests of the reviewers. In addition, I consider it necessary to develop the paper by adding at least 10 recent international papers in the discussion of the results obtained.
