

Editor's Comment:

We carefully analyzed the review process, the reviewers' recommendations and the final paper. The paper has been improved as a result of the reviewers' recommendations. However, at present the paper is without accuracy and clarity.

The paper can be accepted for publication only after the following corrections:

1. Unitary use of units of measurement. Currently, 3 different methods are used: kg/ha, kg ha⁻¹ and kg per ha. Only one way of expressing the units of measurement should be used, preferably kg ha⁻¹. These must be modified throughout the paper, tables and for all units of measurement used.
2. At the end of the introduction, the purpose and objective of the paper must be clearly stated.
3. The paper must be finished to correct numerous errors of expression.
