

**Editor's Comment:**

We carefully analyzed the review process, the reviewers' recommendations and the final paper. Unfortunately, the final paper does not correspond to be accepted for publication. The reviewers recommended improving the references used and adding to some data in the form of graphs synthesized from the literature. The authors did not make these improvements. Consequently, the paper is not recommended for publication because it presents old references, at the level of 2016, and radical, topical improvements are needed. It is also necessary to include in the paper tables and figures summarized from the literature in each chapter of the paper.
