

Editor's Comment:

Based on the author's response, it seems that they have revised the manuscript according to reviewers comments. However, I have some suggestions before this manuscript is considered for publication.

1. In Abstract, authors should mention percent decrease or increase in parameters before and after treatment. 'Significant change' as they have mentioned is not clear.
2. In Introduction, some paragraphs are just one sentence. They need to merge and make appropriate and meaningful paragraphs.
