

**Editor's Comment:**

Please ignore my previous email and consider this one, the paper is not accepted yet.

The above manuscript titled "Oral submucous fibrosis with and without associated oral squamous cell carcinoma" has been reviewed and

1. I have not seen any images/gross pictures/ histology/pathology to demonstrate the above findings or to confirm the text
2. In the conclusion stated "It is concluded that tumors show well-differentiated histology and less lymph node involvement" what this statement refers to.
3. The whole article needs revision
