

**Editor's Comment:**

In general, all reviewers gave good comments and good ratings (9 & 7) to this manuscript. I have read the author's response to the reviewers' comment. The author claims he has made the necessary corrections based on the comments. However, there are still a few comments not being addressed and also typo errors in the manuscript. I would suggest the author to recheck the manuscript again (highlighted in blue colour in the attachment).

After the author has done all the corrections. **Then I would recommend that this article be published in the journal.**
