

**Editor's Comment:**

I have reviewed the article which was sent to me.

It still needs minor revisions, some explanations are missing (eg initial thrombocytopenia?).

Some references cited are not related with the case (eg 6, 10).

More references are needed to sustain the diagnosis.

The case must be "discussed" not only presented.

Some medical terms are not correctly used (English language is not correct), such as :

"Raised JVP, Distant heart sounds heard on auscultation, Bibasilar crackles revealed through chest examination, No ascites anywhere"...

**Editor's Details:**
