

Editor's Comment:

The manuscript lacks scientific merits and is not well presented.

The author has not addressed all the reviewers' comments. (Referring to comments by Prof Victor Monteon and Daniel Geleta)

For example, in Materials and methods, there is no mention of sample size, its calculation, inclusion, and exclusion criteria....

The manuscript requires major formatting. Please follow the journal's guidelines for formatting.

The figures are not appropriate (avoid using color background and include a proper description for the figures)

In some paragraphs, the author has used italics and bold for highlighting his points.

The manuscript in this form is not acceptable for publication, it requires major revision and to be re-reviewed (Preferably by Prof Victor Monteon, since the majority of concerns are raised by him).
