

Editor's Comment:

I have checked the submitted paper,

"COVID-19 Pandemic and Social Fractures in Nigeria: Challenge to Public Policy Framing."

The paper is well written. It reports important findings for COVID-19 in sub-sahara Africa countries.

I suggest two minor revisions for improvement.

1. The authors should stress the importance of case studies for COVID-19 in Sub Sahara African countries, compared with other countries. Although the present manuscript introduces economic activities in Sub-Sahara Africa countries, they aren't compared with Europe, American and Asia countries. Where are the difference? Endemic disease such as malaria, refugees from wars, clean water, ... The authors should at first summarize their findings at first. Then the authors explained their findings in more detail.

2. I am wondering whether the paper should be published as a review article. It may be better to publish the manuscript as 2. Short Research Articles or 3. Short communications
