

SDI EDITORIAL COMMENTS FORM

EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>1. Results and discussion section should be improved by adding some data tables or data figures related to the 9 parameters discussed in the results (collection of chinara leaf litter, packing & transportation of chinara leaf litter etc.). If interviews were conducted then please provide data related to these interviews. The study is a good effort to highlight ITK and traditional interventions and to streamline advanced technology integration in those ITKs.</p>	<ul style="list-style-type: none">• The current study documented the ITKs related to Chinara charcoal making by the indigenous communities of Kashmir which is merely based on qualitative data summarised as text data in the manuscript. This study will bring the wisdom of the past to the present, preserve the ITKs for future dissemination and streamline advanced technology integration in those ITKs.• A separate manuscript based on quantitative data related to the collection of chinara leaf litter, chinara charcoal making, household consumption and marketing of chinara charcoal, income generation, contribution to household economy, gender dimensions etc. collected through interviews is under preparation which will be communicated in future.• Hence, addition of data tables or data figures related to the 9 parameters discussed in the Results and discussion section is not desirable. Now, kindly consider the manuscript for publication in the next issue of your journal as such and convey me accordingly.
