PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The manuscript is very interesting. It presents and systematizes a large amount of statistical data. But I would like to draw attention to the conclusion. For completeness of the study, it would be advisable in the final part of the article to pay special attention to the practical significance of the study and specific recommendations for both farmers and all parties interested in the results of the study.	
Minor REVISION comments	The manuscript notes: "Youngsters belonging to farm families constitute an ample part of Indian population and their forthcoming preferences of occupation other than farming is a matter of concern not only to their concerned family but also for the entire nation. With the reduction of land holding and lowering down of profitability in farming, large scale movement of rural youth is taking place in search of employment, luring farming youth to non-farm sectors. It is a major concern and is challenge for sustaining growth in agriculture and food security of the country". Considering the importance of this problem, as well as the fact that similar problems occur in other regions of the world, it would be advisable in this study to consider this in detail and identify possible solutions.	
Optional/General comments	Given the significant amount and variety of statistical data, as a recommendation, I would like to note the possibility of conducting a detailed correlation analysis with the construction of digital and / or graphical models that reflect the level and nature of the influence of individual factors (combinations of factors), classified according to certain criteria, on a specific resultant attribute (resulting attributes). It seems that the use of the correlation method would significantly increase the depth and quality of the study.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
