PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The introduction does not sufficiently address the problem, it does not define the geographical area from which the clinical case derives. It is made clear that there are several differential diagnoses to rule out before establishing the definitive post-artesunate late hemolytic anemia, which were not possible due to budget and infrastructure deficiencies. Prior publication is recommended in depth review.	
Minor REVISION comments	Theoretically, it is recommended to expand the introduction, in the description of the clinical case the healthcare center where the clinical case is indicated, and of course its geographical location must be specified. The bibliography should be expanded, updated and adjusted to the style requirements of the journal. I recommend reading the following article: Salehi M, Masoumi-Asl H, Assarian M, Khoshnam-Rad N, Haghi AM, Nikbakht M, Khalili H. Delayed Hemolytic Anemia after Treatment with Artesunate: Case Report and Literature Review. Curr Drug Saf. 2019;14(1):60-66. doi: 10.2174/1574886313666181109150157. PMID: 30411691.
